Fuel System Open Chamber / Lean Burn

Governor (Gov.) ECU

Aspiration (Asp.) Turbocharged & air-to-air cooled

**Customer benefits** 

Low emission standard, lean burn technology resulting in lower NOx emissions

High transient and block load capabilities

Full duty cycle capability, from prime to continuous power

Electronically controlled high efficiency engines

### Standard equipment

Engine and block	Cast iron cylinder block with inspection door per cylind	dar
LIIVIIIE AIIU DIUCK	Cast Iron Cyllider block with hisbection door bei Cyllic	161

Cast iron cylinder liners, wet type and replaceable valves guides and seats

Separate cast iron cylinder heads with 4 valves

Hardened steel forged crankshaft with induction hardened journals, crankpins and radius

Lube oil cooled light alloy pistons with high performance piston rings

Cooling system	Radiator and hose	s supplied separately
Cooling system	radiator and nose	s supplied separately

Thermostatically-controlled system with belt driven coolant pump and pusher fan

#### **Lubrication system** Full flow oil filters

Water cooled lube oil cooler

#### **Fuel system**Low Pressure gas supply – open chamber combustion

Optimum performance and efficient use of fuel for COP, CHP and PRP applications

## Air intake and exhaust system

Top-mounted turbocharger optimized for gen-set application

Special rear mounted air filter with restriction indicator

Exhaust manifold shield for heat isolating

#### **Electrical system**

24V DC electric starter motor and battery charging alternator for 1500 and 1800 RPM engines

Low oil pressure & high water temperature sensors

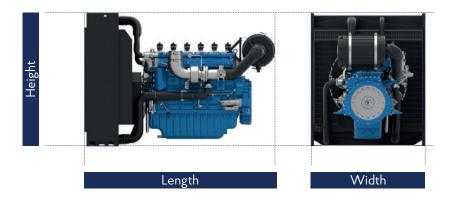

#### Flywheel and housing

SAE 1 flywheel housing and 14" flywheel

### Ratings definitions

#### Continuous Power (COP)

Continuous Power is the maximum power available for an unlimited period of use at a constant load factor. No overload capability is allowed.

#### **Unlimited Prime Rated Power (PRP)**

Prime Power is the maximum power available for unlimited hours of usage in a variable load application. The average load factor should not exceed 70% of the engine's PRP power rating during any 24 hour period. An overload capability of 10% is available, however, this is limited to 1 hour within every 12 hour period.

- 1) All ratings are based on operating conditions under ISO 8528-1, ISO 3046, DIN6271. Performance tolerance of ±5%.
- 2) Test conditions: 100 kPa, 25°C air inlet temperature, relative humidity of 30%, with fuel density 0.84 kg/L. Derating may be required for conditions outside these; please contact the factory for details.
- 3) Power output curves are based on the engine operating with fuel system, water pump and lubricating oil pump; not included are battery charging alternator, fan and optional equipment.
